Q: Mysql stored procedure returning data from multiple tables I'm having some issues with a stored procedure that I wrote. I have 2 tables, customer and invoice, customer have an invoice\_id field, I want to create a stored procedure that returns the invoice\_id and invoice\_year from the customer\_table, when matched with the customer\_id in the invoice\_table.

```
CREATE DEFINER=`myuser`@`%` PROCEDURE `GetInvoice`( IN invnum integer, IN cusname varchar(128), OUT invname varchar(128), OUT invyear varchar(128) ) BEGIN SELECT S.inv_id FROM invoice_table AS S, customer_table AS T WHERE S.customer_id = T.customer_id AND S.invnum = invnum AND S.cusname = cusname ; END
```

But I'm getting this error: Code: IF (DbConn.State ConnectionState.Open) THEN DbConn.Open(); END IF; MyCommand.Connection = DbConn; MyCommand.CommandText = "GetInvoice"; MyCommand.CommandType = CommandType.StoredProcedure; MyCommand.Parameters.AddWithValue("INVNUM", invnum); MyCommand.Parameters.AddWithValue("CUSNAME", cusname); MyCommand.Parameters.AddWithValue("INVNAME", invname); MyCommand.Parameters.AddWithValue("INVYEAR", invyear); MyCommand.ExecuteNonQuery(); Error: Code: 55cdc1ed1c
